Title : MS Office Communication
Server 2007-U.C Voice
Specialization

Vendors : Microsoft

Version : DEMO

NO.1 You are an IT professional who are specialized in Microsoft Office Communications Server 2007.

Now you are employed in an international company which is named Wiikigo. You are in charge of providing technical support to your company. You are planning to deploy a Microsoft Office Communications Server (OCS) 2007 network. Installation of 500 Microsoft Office Communicator phones in Huston is included in the deployment plan. According to the company requirement, you have to make sure that the OCS 2007 deployment meets the following requirements:

Users must be able to use the Session Initiation Protocol (SIP) addresses and a five-digit dialing feature to make Office Communicator calls to each other.

Users must be able to make Public switched telephone network (PSTN) calls to the Office Communicator phones. So what should you do? (Choose more than one)

- A. A normalization rule in the Huston location profile should be configured to translate the fivedigit dialing into a full E.164 number for the Office Communicator users.
- B. A Mediation Server in Huston should be installed and configured.
- C. All the Office Communicator users should be configured with a SIP URI and a full E.164 number.
- D. A Phone Usage record should be configured for Huston, and it should be assigned to the Office Communicator users.
- E. A Route should be configured to the Huston Mediation Server, and the Target Regular Expression should be configured to support the five-digit dialing feature.

Answer: A, B, C

NO.2 You are an IT professional who are specialized in Microsoft Office Communications Server 2007.

Now you are employed in an international company which is named Wiikigo. You are in charge of providing technical support to your company.

You have Microsoft Office Communication Server (OCS) 2007 and Microsoft Office Communicator 2007 client installed on your company network.

You set up a Windows SharePoint Services 3.0 server and configure the Windows Server 2003 Certificate Authority for autoenrollment. Besides, you have Office Communicator Phone Edition phones installed and block UDP ports between 100 and 200 on your firewall that are outbound to the Internet. You find that the Office Communicator Phone Edition phones do not register to OCS 2007 server. These phones do not have correct IP addresses and do not display the correct date and time. You have to make sure that the following business requirements are met:

The network must have full Exchange Server 2007 functionality. The phones must be connected to a separate virtual LAN (VLAN) along with all required servers that serve the physical phones. So what should you do to make sure of this? (Choose more than one)

- A. DNS for a SIP domain and an SMTP domain should be configured. DHCP scopes and scope options should be configured for the Office Communicator Phone Edition phones and the SharePoint Server. DNS SRV records should be configured for the SharePoint Server.
- B. An internal NTP time source should be configured. A DNS SRV record should be configured to point to the internal NTP time source.
- C. DNS for a SIP domain only should be configured. DHCP scopes and scope options should be configured for the Office Communicator Phone Edition phones.

D. DNS for an SMTP domain only should be configured. DHCP scopes and scope options should be configured for the Office Communicator Phone Edition phones.

E. DNS for a SIP domain and an SMTP domain should be configured. DHCP scopes and scope options should be configured for the Office Communicator Phone Edition phones.

Answer: B, E

NO.3 You are an IT professional who are specialized in Microsoft Office Communications Server 2007.

Now you are employed in an international company which is named Wiikigo. You are in charge of providing technical support to your company.

You perform the deployment of Microsoft Office Communicator 2007 Phone Edition devices.

Overlapping fixed digit normalization rules are used by the devices. You are testing the devices and find that when in the off-hook mode, the devices dial a number before it is completely entered. You have to enable three-digit fixed-digit dialing when the devices are in off-hook mode.

So what action should you perform?

A. Use the no-quick-dial feature of Enterprise Voice Route Helper to configure the dial plan.

B. Client-side normalization should be enabled in Enterprise Voice Route Helper.

C. The "t" prefix value after the "+" sign should be used in the normalization rule.

D. The following normalization rule should be used during the testing phase. $\wedge\{d\{1,1\}}\$$ Pre Pend +1\$1

Answer: A
